PROJECTS

- Intelligent Carpool System** 2016
The idea is to share the ride on the same road on same vehicle. Our main objective is to facilitate our community with ease and comfort journey provided by this system. Which is time and money saving with less congested and less polluted roads
Developed Using: C#, ASP.NET WEB Forms, jQuery, Ajax, HTML, CSS, LINQ SQL Server 2016, Navicat
- Book sharing Portal** 2015
The main purpose of this project to get rid from the problem which people face to for getting their books, to build an online community that enables members to share ideas, ask questions, get answers and provide feedback regarding books delivery improvements.
Developed Using: C#, ASP.NET MVC, jQuery, Ajax, HTML, CSS, LINQ SQL Server 2016, Navicat
- Tournament Planner** 2015
Designed a database schema to store the game matches between players and plan the matches of the round robin tournament. Python was used to query this data and determine the winner of the various games.
Developed Using: PHP, , MyAdmin Database, PHP storm
- Item Catalog** 2015
Developed a data driven web application that provided a list of items within a variety of categories, user-registration and authentication system (with different users having different access privileges).
Developed Using: SQL DB with ASP.NET MVC .EF6, HTML, CSS,
